

# Industry Overview: Power Generation

## Peak Performance with less Outage Time

### A Faster, Better Clean.

Power Generation professionals know one key to peak performance is clean electrical equipment. However, the demand to keep the equipment running often leads to deferred cleaning and maintenance, reduced efficiency, and in some cases, outages caused by flashover.

Dry ice blast cleaning provides a non-conductive, environmentally responsible cleaning process that allows equipment to be cleaned in-place, without cool down or disassembly. In addition, the outage time typically needed for cleaning can be reduced up to 65%.

### Discover Cold Jet.

Contact Cold Jet today to speak with an industry expert and choose the best cleaning solution for your application. Call **09 262 3235** or visit us online at [www.coldjet.co.nz](http://www.coldjet.co.nz) to learn more.

#### APPLICATIONS

- Turbines
- Compressors & Generators
- AC/DC Motors
- Circuit Breakers
- Switch Gears
- Transformers
- Rotors
- Stators
- Insulators
- Field Frames
- Substation Isolators and Bushings

#### KEY BENEFITS

- Reduce catastrophic failure
- Improve megohm readings
- Increase polarization indices
- Improve thermal dissipation
- Reduce outage time for cleaning by 65%
- Eliminate secondary waste
- Clean in-place, no cool down or disassembly
- Non-conductive
- Non-abrasive
- Environmentally responsible
