

# Industry Overview: **Plastics**

Any Ice. Any Application. Anywhere.

## SDI Select™ **60**

For molders in the plastic industry, Cold Jet has provided ongoing solutions to enable optimum manufacturing processes by cleaning contaminants from cavities, vents and hard-to-reach places faster, better and more economically than traditional methods. With the SDI Select 60, end users can now tap into the ultimate precision technology required to clean small molds in larger volumes – to quickly and effectively clean the largest molds, including fenders and dashboards. This can reduce cleaning times by as much as 75%, all with the lowest air and ice requirements. This provides the most cost-effective, user-friendly cleaning solution for molders worldwide.

### ANY APPLICATION

- Blow Molds >>
- Compression Molds
- Extrusion Dies
- Injection Molds
- Thermoform Molds
- Plastic Screws
- Urethane Molds and Overspill
- Plate out and off gassing
- Deflashing and surface preparation
- Gloss leveling
- Deburring machine parts

### KEY BENEFITS

- Improve product quality
- Reduce scrap
- Reduce production downtime
- Reduce cleaning time and labor costs
- Clean in-place, no disassembly required
- Non-abrasive, no damage to equipment
- Environmentally responsible
- No secondary waste
